**New**

Bitwards compatible
* Bluetooth Low Energy

Maximum security and flexibility

Duo BLE*

The Swedish made locking system

Exma Duo BLE: Standalone locking system with easy installation and highest security

Quick and easy to install…

The Exma Duo BLE is a standalone system, easy to install. No extra cabling or perforation of the door is necessary. The unit is mounted under the lever handle and cylinder ring and is compatible with standard module locks.

… and use

The system is also convenient for the end user. It is easy to use, offers maximum security and may be customize to meet individual customer needs

You may easily set different security levels for different times during the day. By using the Exma Mobile App BLE, available for for IOS/Apple and Android, you are in control of the system, wherever you are.

Safe and secure

All passages are logged in the system memory and you may easily administer different permission settings

A device may easily be removed from the system, ensuring no unauthorized entry.

Flexibility

Always being able to manage the lock with a regular, physical key offers extra security since the lock is always working – even in case of power failure.

- Key
- Phone
- Time
- BLE (IOS/Apple & Android)*

As system administrator you are always in control of who may open the lock and at what times. This makes the Exma Duo BLE a perfect solution for e.g. elderly homes.
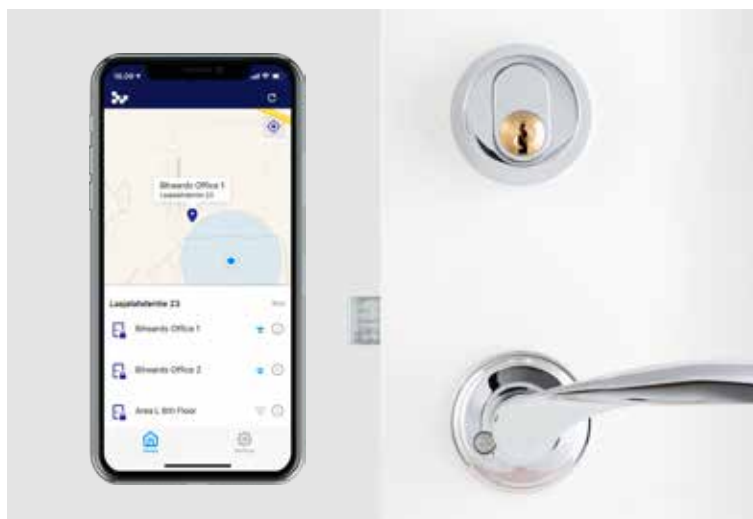

Bitwards support

The Exma Duo BLE supports the Bitwards Access Platform. This cost-effective digital access solution makes it possible to convert conventional spaces and products into highly scalable services.

The mobile access removes the need for physical keys and offers a superior user experience.

The Bitwards app turns your smartphone into a single hub for accessing multiple assets.

* BLE, Bluetooth Low Energy, makes it possible to use smartphones (IOS/Apple & Android) as keys and admin tools. The only thing requiered is the Exma Mobilapp BLE.
